講義概要/Course description

The Japanese economy - once an economic powerhouse, now suffers from an array of macroeconomic problems; long-term lacklustre economic performance, a high level of public debt, long-term deflation followed by inflation, the aging society, the population decline, the lowered fertility rate, and the troubled social welfare system. We try to understand how these economy-wide problems affect our decision-making, the government and policy-making. This course introduces "problem-motivated" issues and provides an interactive approach to tackle the 'big picture' macroeconomic problems.

Macroeconomics I mainly sets up a basic analytical framework improving the data literacy, while Macroeconomics II closely looks into the policy tools that manage the stability of the macroeconomy.

達成目標/Course objectives

We gradually build our understanding of the highlighted problems and think about possible solutions. This eventually enables engaged students to critically examine the effects of macroeconomic policies.
